

Investment Strategy

The Ostrica US Investment Grade Corp Fund predominantly invests in corporate bonds issued by companies in the United States. Ostrica mostly invests in corporate debt that has a public listed equity arm or market traded CDS. We use forward looking models to calculate the probability of default and a fair value spread of the bonds in the universe. ETFs are being used for tactical asset allocation purposes: active duration management, active spread management & active management of liquidity premia. Using these principles of strong risk management, the fund provides a very stable investment in US investment grade corporate bonds.
